## Product catalogue

GIS drive electronics for  
RISO CF3  
& CF6 printheads

Overview

GIS electronics enable precise, scalable and reliable control of RISO CF3 & CF6 printheads using an indirect architecture on the Ethernet platform. Designed for OEMs and machine integrators, the GIS solution combines compact printhead cards, high-capacity manager cards and the Atlas software platform to accelerate development while ensuring production-grade performance.

Key Benefits

High-fidelity waveform control: binary, greyscale and multi-pulse with fine slew-rate and amplitude shaping.

Scalable system architecture: distributed Ethernet option.

Small form factor printhead cards designed for single head or large arrays.

Integrated safety and diagnostics: temperature monitoring, thermal cut-out and EEPROM readback.

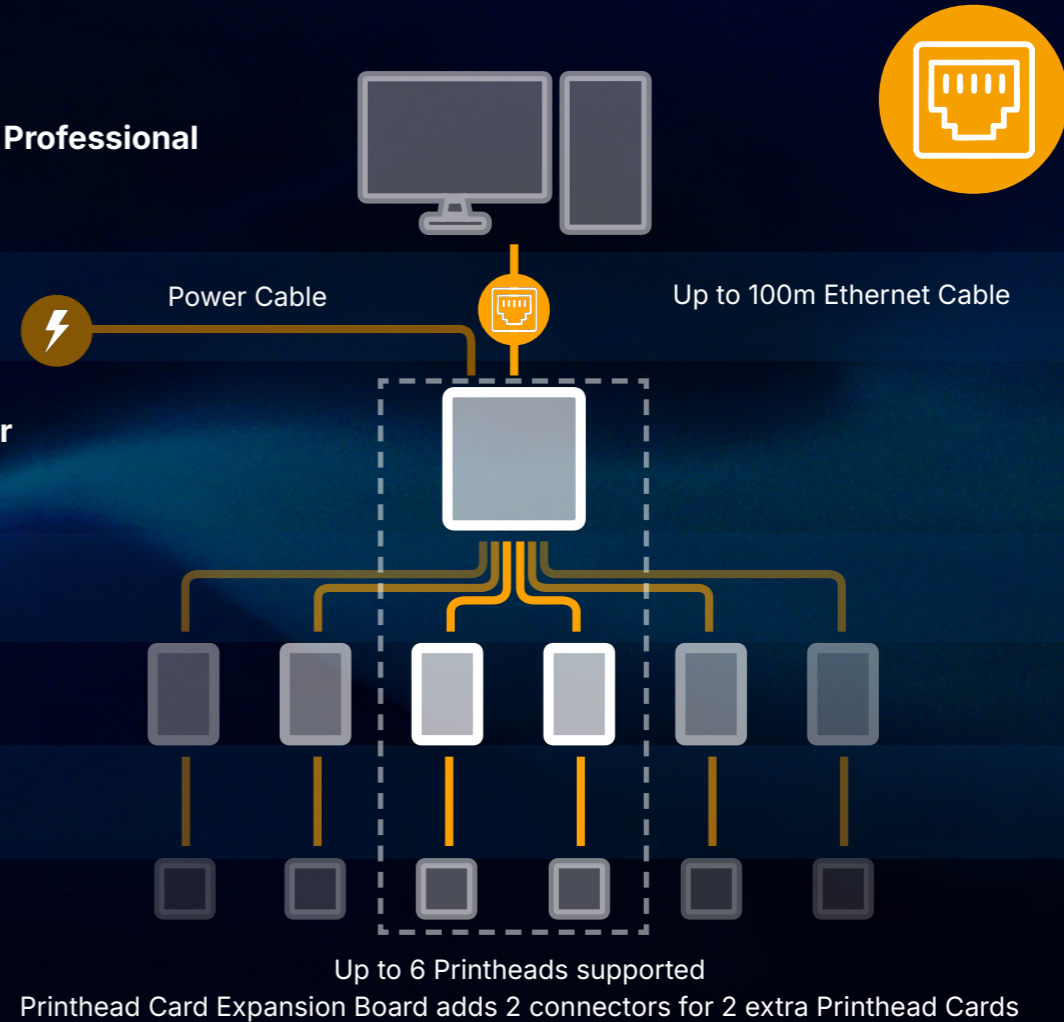

Seamless integration with GIS Atlas software, Professional and Server.

Architecture Overview

GIS implements an indirect architecture: the Printhead Card interfaces directly with the RISO CF3/CF6 printhead, while a Printhead Card Manager handles data distribution, synchronisation and power management. Systems can be configured on the Ethernet platform to suit throughput and scaling needs.

Samba Printhead Card Manager (InDirect) Configuration via Ethernet

PC, Print Server + Atlas Professional

Printhead Card Expansion Board 1200491

Signal Manager with Master Relay 1200607

**Ethernet Platform**

Printhead Card (Product code: 13005710); each card connects up to two RISO CF3/CF6 printheads. The Ethernet platform supports distributed architectures and scaling via the Ethernet Printhead Card Manager.

**Supported printheads**

**RISO CF3 / CF6**

Max printheads per card	2
Power supply	48V DC, 20A max
Dimensions (H×W×D)	120 × 52 × 16 mm
Weight	46g
Waveforms	Binary, greyscale and multi-pulse
Monitoring & safety	Printhead temperature monitoring; thermal cut-out
Diagnostics	Printhead EEPROM readback
Cable length: Manager → Card	Up to 1m
Cable length: Card → Printhead	300mm
Software compatibility	Atlas Server, Atlas Professional

**Compatible Components**

- Product detect / encoder signal manage modules.
- Ink delivery system components for controlled flow to RISO CF3 / CF6 printheads.

Printhead Card Manager 13005709

Type	Product codes	Max connected Printhead Cards	Notes
Printhead Card Manager (Ethernet)	13005709	Connects up to 2 Printhead Cards	Base configuration
Expansion Board	1200491	+2 Printhead Cards per expansion board (up to 6 total*)	

\*Maximum achievable printheads may be limited by data rate, firing frequency and power consumption.

**Connectivity & Cabling - Ethernet**

- Data:**
- PC to Printhead Card Manager > up to 100m.
  - Printhead Card Manager to Printhead Card > up to 1m.
- Power:**
- 48V DC to supply the Printhead Card Manager.
  - No separate printhead PSU required.

## GIS Ordering Information

Speak to our experts for guidance on how to configure your system to your exact needs, the part codes for this example system are below.

Category	Product	Code
Printhead Card (Ethernet)	RISO CF3 / CF6	13005710
Ethernet Printhead Card Manager	Base card	13005709
Ethernet Expansion Board	Adds 2 cards per expansion (up to 6 total)	1200491

## GIS Notes & Disclaimers

- Specifications are subject to change without notice.
- Performance characteristics depend on system configuration, ink and operating conditions.
- All trademarks are the property of their respective owners. Atlas® is a registered trademark of Global Inkjet Systems (GIS).

## GIS Typical Applications

- Labelling.
- Graphics.

## GIS Software – Atlas® Platform

Atlas is a software platform for the rapid development of industrial inkjet user interface and machine control systems. Atlas can control a complete machine or act as a component in larger systems. Its unique modular and open design allows you to customise, as well as to integrate additional tools to enable a quicker route to market for your product.

## GIS Ink Management Systems

GIS ink management systems provide controlled ink supply, pressure regulation and flow management for industrial inkjet systems. Designed to support stable jetting across a wide range of printhead technologies, they can be configured for different flow requirements, ink types and machine architectures. GIS can advise on the appropriate ink delivery configuration to match the selected printhead, application and production environment.
